

Deploying to Heroku

JULY 27, 2021

Learning Objectives

At the end of this lesson, you should be able to:

- Engage with Heroku using the Command Line Interface (CLI) tool.
- Deploy a continuous deployment pipeline to Heroku using Github Actions

What is Heroku?

What is Heroku?

Platform as a service (PaaS) that enables developers to build, run, and operate applications using cloud web **hosting** services

What is Heroku?

Platform as a service (PaaS) that enables developers to build, run, and operate applications using cloud web **hosting** services

Deployment

In software, **deployment** describes all of the steps, processes, and activities involved in making a software system or update available to its intended audience.

Production Environment

A **production environment** is where the latest version of software, products, or updates are deployed to users.

Hosting

Web **hosting** is a service that allows people and organizations to publish their websites on the Internet.
